

EZ Estimates Concrete

Fast Bids. Clean Numbers.

Concrete estimates that make sense before you bid.

EZ Estimates Concrete helps small concrete contractors build clean estimates, review real costs and margins, and send customer-ready proposals without spreadsheet chaos or enterprise software.

Who It Is For

Small concrete contractors, concrete subcontractors, owner-operators, driveway and paving contractors, residential/light commercial concrete crews, and slab/foundation contractors.

Pain Points

- Old spreadsheets and copied bid files
- Missed pump, cleanup, demo, haul-off, labor, equipment, disposal, or rebar costs
- Unclear markup and margin before sending a proposal
- Hard-to-revise estimates
- Customer proposals that do not look as clean as the work being sold

What It Helps Estimate

Slabs, footings, piers, grade beams, sidewalks, curbs, paving, pump, cleanup, demo, haul-off, cure and seal, and supported rebar workflows.

Internal Report vs Customer Proposal

Internal Estimate Review: Check concrete quantity, direct cost, cost buckets, markup, gross profit, margin, tax, total bid, and pricing warnings.

Customer Proposal: Send clear scope, pricing, project information, notes, terms, exclusions, and a clean branded proposal without internal cost breakdowns.

Pricing

Founder Plan: \$499/year, limited early-user offer, pricing locked for 24 months while active.

Standard Plan: \$79/month or \$699/year.

Setup Package: \$299 one-time for company profile, proposal header, concrete pricing, rebar pricing if applicable, labor/equipment assumptions, default markup, and starter work item review.

Demo CTA

Bring one real job.

In 20 minutes, we will build the estimate, review the internal numbers, and show the customer proposal.
